

# Making Infection Control Really Work – Managing the Human Factor

Prof. WH Seto, Hong Kong  
A Webber Training Teleclass

**Making Infection Control Really Work  
- managing the human factor**

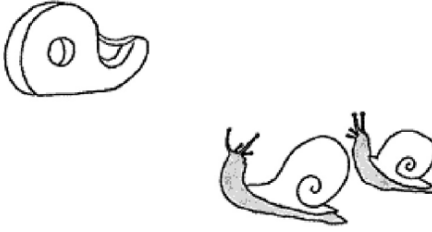

WH Seto  
Chief ICO,  
Hospital Authority,  
Hong Kong.

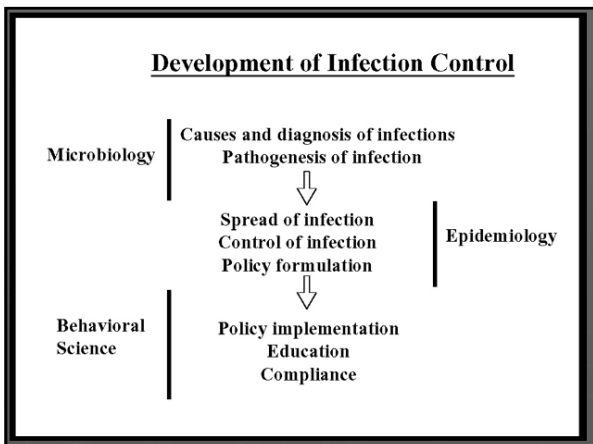

Hosted by Jane Barnett  
jane@webbertraining.com

A Webber Training Teleclass www.webbertraining.com

Very difficult to change people's thinking

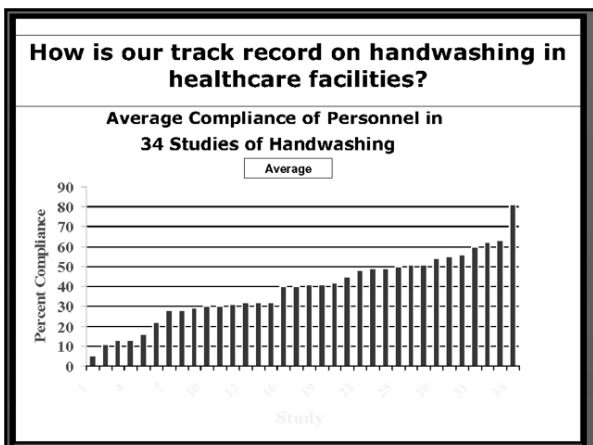

*"I don't care if she is a tape dispenser, I love her"* S. GROSS

**"Most nosocomial infections that are preventable  
..... are caused by inappropriate  
patient-care practices"**

Robert Haley in  
SENIC study, 1985

Survey of 17 CDC Recommended PCPs in 10 Hospitals  
Hong Kong (720 nurses) ICHE 90: 11:255  
5 Guidelines

Regular (4) Often (3) Occasional (2) Rarely (1)

**47% gave a score of <3**

# Making Infection Control Really Work – Managing the Human Factor

Prof. WH Seto, Hong Kong  
A Webber Training Teleclass

**Treatment was successful but  
the patient died of infection**

**We know how to prevent the infection.....  
but we cannot implement the policy**

B. Farr, ICHE 2000;21:411

Commenting on  
implementing Infection Control policies....

**“we have met the enemy, and he is us”**

## Development of Infection Control

**“Why re-invent the wheel.....**

**Let’s learn from the behavioral sciences”**

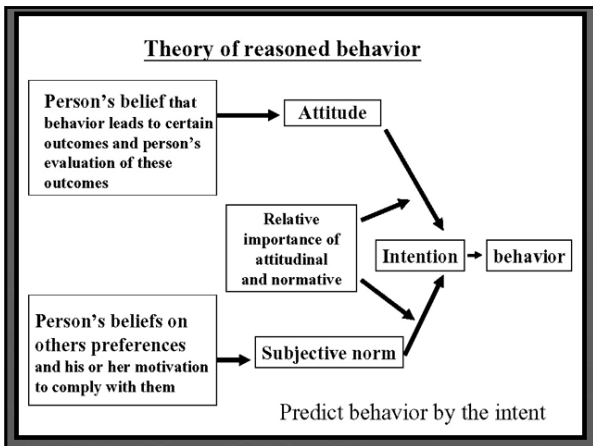

Ref: JHI 1995: 30 (supp) 241-247

**Social psychology is defined as the scientific  
study of .....**

**how people think about, influence and  
relate to one another.**

# Making Infection Control Really Work – Managing the Human Factor

Prof. WH Seto, Hong Kong  
A Webber Training Teleclass

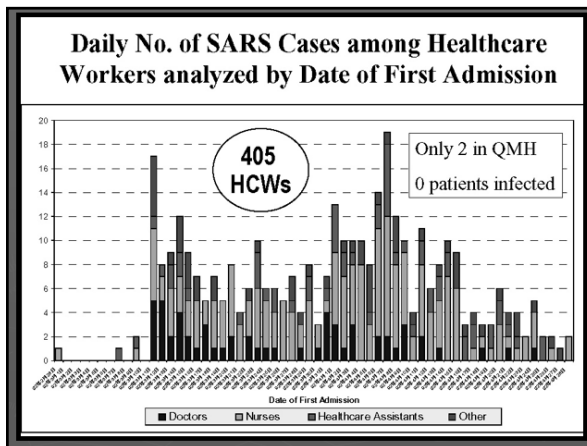

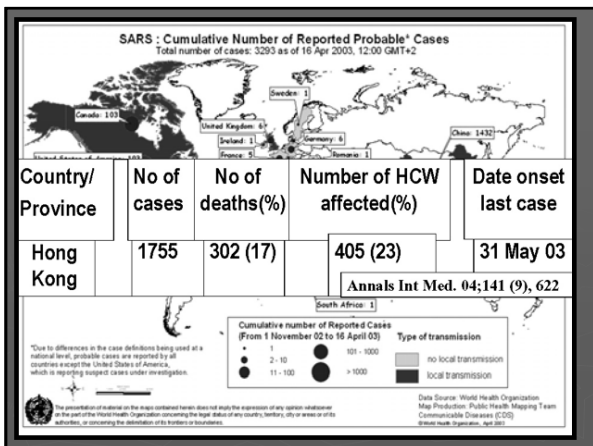

**Discontinuation of Recapping in 208 Nurses 5 weeks after introduction of sharp boxes**

Groups	Nurses with no recapping (%)		
	All Nurses	Agreeable	non-agreeable
A. Simple announcement	21%	30%	15%
B. Passive method	66%	85%	21%*
C. Active & passive methods	85%	89%*	83%

Difference between rows are all significant ( $p < 0.05$ ) except for numbers with asterisk

Seto et al, JHI 1989:14:29

The great importance of Face to Face education

**Aim to educate everyone by direct interaction**

- 11 sessions with doctors
- 22 sessions with nurses
- 15 sessions with minor staff
- 19 sessions open to all hospital

67 lectures given in the first week

**Organizational Behavior is the study about how people act within organizations**

- considered to be an integral part of management science.

# Making Infection Control Really Work – Managing the Human Factor

Prof. WH Seto, Hong Kong

A Webber Training Teleclass

## Participatory Decision-making (PDM)

Influence exerted by the employee from assuming an active role in a decision-making process.

Vroom and Jago 1988.

## Types of PDM

- No participation – decision only by manager
- Information – specific request by manager
- Individual opinion – consulted by the manager
- Group opinion – contributed in a group discussion
- Full PDM – consensus of entire group

Journal of Hospital Infection (2004) 58, 1-13

## % of correct IV PCPs for study groups - before and after implementation

	Before	After
1. No Participation	13.5	46.4 <sub>a</sub>
2. Request Information	19.6	43.2 <sub>a</sub>
3. Personal Opinion	26.6	59.5 <sub>a</sub>
4. Group Discussion	14.9	76.0 <sub>b</sub>
5. Full PDM (R)	14.1	74.2 <sub>b</sub>

Different subscript differ significantly (p<0.05).

Consumer Behavior is the study of how and why consumer buy and consume

## Opinion Leaders

Opinion leaders are members within a social group with significant social influence over others.

Engel et al

# Making Infection Control Really Work – Managing the Human Factor

### A Webber Training Teleclass

	Direct observation of Incorrect Practices		
	Before Education	After Education	p
<b>Group A</b>			
OL & Lecture	62% (n=90)	42% (n=151)	p<0.01
<b>Group B</b>			
Lecture only	69% (n=90)	62% (n=253)	0.34

n=total number of practices assessed

### Has a Link Nurse Programme since 1994

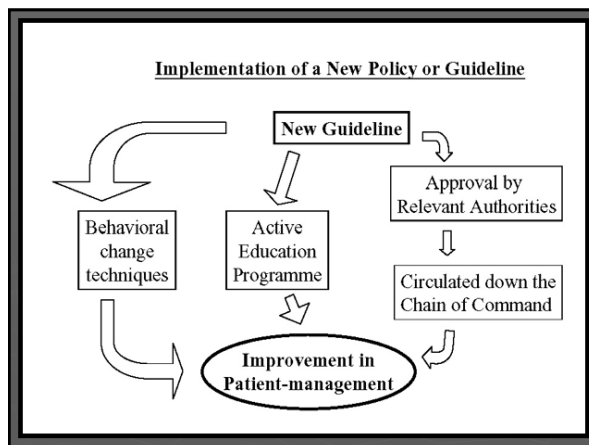

- Received 2-days training course on infection control.
- Awarded a certificate and badge on passing the course assessment.
- ICLNs coach all nurses and healthcare assistants in their wards
- Report all important events.

Seto et al: Am. J of Infection Control 1991;19:86-91. Ching, Seto: Journal of Advanced Nursing.1990;15:1128-1131.

Effect of 60 Link Nurses Participation					
	UP guideline in wards	Overfill sharps boxes	Cap-device on injection trolleys	bld-taking trolleys	Gloves on bld-taking trolleys
<b>Pre ICLN (%)</b>					
11/ 98	83.3	51.2 <sub>a</sub>	33.3 <sub>a</sub>	57.4 <sub>a</sub>	46.3 <sub>a</sub>
<b>Post ICLN (%)</b>					
3/ 99	82.4	8.8 <sub>b</sub>	82.8 <sub>b</sub>	83 <sub>b</sub>	75 <sub>b</sub>

a & b differs significantly with p<0.01

# Making Infection Control Really Work – Managing the Human Factor

Prof. WH Seto, Hong Kong  
A Webber Training Teleclass

## Steps in Guideline Implementation

1. Formulate guidelines according to hospital needs.
2. Categorize recommendations into the 4 types.
3. Obtain necessary resources.
4. Conduct research for staff resistance practices.
5. Measure baseline rate for demonstrating change.
6. Formulate and execute education program .
7. Evaluate and monitor progress with staff feedback.

## All recommendations are categorized into :

1. Established practice :  
A hospital policy or a standard practice.
2. Non-established practice (easy implementation) :  
Easily implemented by usual educational program
3. Non-established practice (lack of resources)  
Difficult implementation due to lack of resources.
4. Non-established practice (staff resistance)  
Difficult implementation due to high staff resistance.

## Study in 10 Hospitals on 5 CDC Guidelines

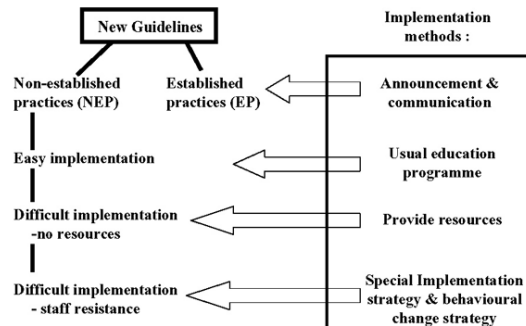

Correlation between estimate of establish practices (EP) and ward practice

Estimate to EP by SNO in 10 Hospitals	Frequency score in Hospital (x)
> 90%	3.68
< 30%	2.17

## Steps in Guideline Implementation

1. Formulate guidelines according to hospital needs.
2. Categorize recommendations into the 4 types.
3. Obtain necessary resources.
4. Conduct research for staff resistance practices.
5. Measure baseline rate for demonstrating change.
6. Formulate and execute education program.
7. Evaluate and monitor progress with staff feedback.

## Scheme for implementation of new guidelines

## Steps in Guideline Implementation

1. Formulate guidelines according to hospital needs.
2. Categorize recommendations into the 4 types.
3. Obtain necessary resources.
4. Conduct research for staff resistance practices.
5. Measure baseline rate for demonstrating change.
6. Formulate and execute education program.
7. Evaluate and monitor progress with staff feedback.

# Making Infection Control Really Work – Managing the Human Factor

Prof. WH Seto, Hong Kong  
A Webber Training Teleclass

## Adopting New Management Paradigms

“Behavioural change does not occur by targeting the individual alone,

organizational environment must also be addressed”

Kretzer & Larson AJIC 1998:26:245

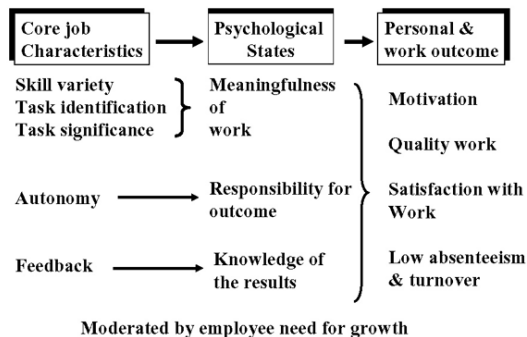

## Job Enrichment

The enhancing of job motivation and satisfaction through the redesign of tasks (horizontal) and responsibilities (vertical).

## Hackman and Oldman Job Characteristic Model (Work Redesign, 1980)

Traces job motivation and outcome to certain critical psychological states which are then link to certain job characteristics

### Job Characteristic Model

### Steps in Job enrichment:

1. Task identification
2. Designing natural work units and assign responsibility
3. Vertical loading – enhance abilities, freedom and responsibility
4. Establish client relationships
5. Open feedback channels

### Task identification for asst. ventilatory care guideline

A. Oxygen therapy	Frequency
Start O <sub>2</sub> therapy	Daily
Deliver inhalation therapy	Daily
Clean & disinfect equipments	Daily
Check disinfection process	Weekly
Check & record O <sub>2</sub> flow	Daily
Check humidifier water	Daily
Assess patient satisfaction	Daily
Disinfect wall humidifiers	Weekly
Set up wall humidifiers	Weekly
Check ambubags, largngoscope & Et introducer.	Weekly

# Making Infection Control Really Work – Managing the Human Factor

## Prof. WH Seto, Hong Kong

### A Webber Training Teleclass

#### B. Respirator care: Frequency

Care of ET tube: change tapes, wash mouth	Daily
Care tracheostomy: change dressing, tapes, wash mouth	Daily
Hourly monitor of patients	Daily
Suction of patients	Daily
Assess patients satisfaction	Daily
Change flex tubes, adapter, HME, suction tube	Daily
Change humidifier water	Daily
Change ventilator tubes humidifier	Alt day
Check disinfection process	Weekly

#### Defining natural work units and assign responsibilities

##### Staff nurse:

1. Daily: oxygen therapy rounds  
Care of ET tube & tracheostomy  
Care of ventilated patients monitoring / suctioning
2. Routine check of disinfection process

##### Student nurse:

1. Delivery inhalation therapy
2. Change suction equipments
3. Daily & weekly disinfection procedures

##### Nurse i/c

1. Review monitor records and
2. Review patients at end of shift

#### Vertical loading enhancing abilities, autonomy & responsibilities

1. Clear definition of responsibilities and supervision
2. Assigning "Ventilatory Equipments Care" Nurse for the student nurse
3. Provide protocols and training for tasks
4. Encourage personal trouble-shooting

#### Enhancing client relationships

1. Assessment for patient satisfaction
2. Patients group into one cubicle with one nurse in charge

#### Open feedback channels

1. Nurse i/c assess daily recordings in each shift
2. Nurse assess disinfection procedures by VEC nurse
3. Weekly summary of CSSD request book by VEC nurse
4. Prevalence survey of PCPs by ICNs

#### Infection rates with UTI, LRTI and Bacteremia

Year:	85-87	90/91	94	97	00
Infections(%)					
UTI:	3.5	1.5	1.2	1.9	1.2
LRTI:	3.9	3.4	4.4	2.2	2.3
Bact:	0.9	1.0	0.4	0.8	0.6
<b>Guidelines</b>	UTI 89	IV 91	LRTI 95/6

## Focus – why do it?

## CQI Project

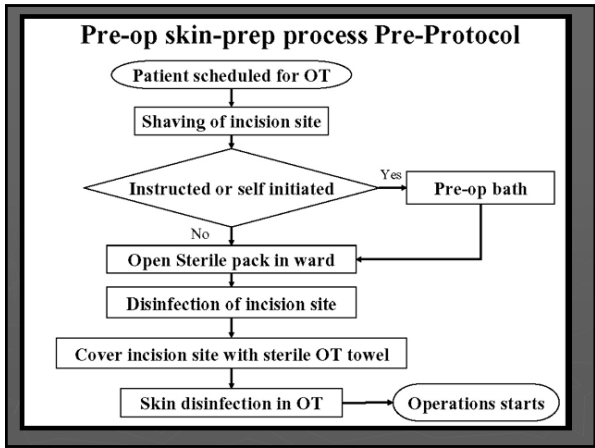

### Reasons for Choosing the Projects

- High Volume.
  - All surgical patients are involved.
- Redundant procedures identified.
- Cost saving.
  - 10,000 CSSD pack saved.
- Manpower saving.
  - In ward and CSSD.
- Assured quality pre-op care for prevention of wound infection.

# Making Infection Control Really Work – Managing the Human Factor

Prof. WH Seto, Hong Kong  
A Webber Training Teleclass

**ANALYSE** – know the process

## CQI Project

Patients' Education Pre-op Bath  
(Pre & Post Protocol Comparison)

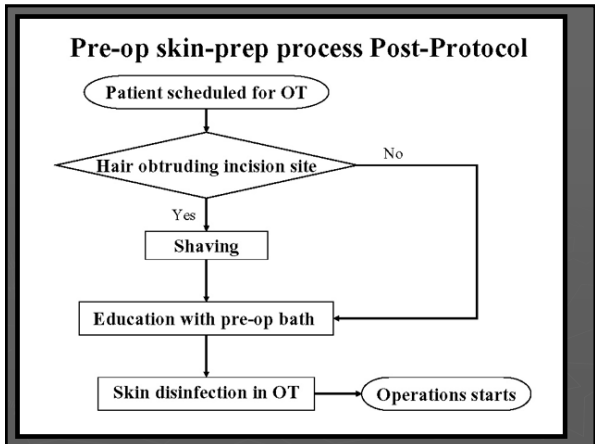

Unit	Patients' Education Pre-op Bath	
	Pre Protocol	Post Protocol
Surgery	6.9%	
O&G	55.6%	
Orth.	0	
<hr/>		
Total	13.7%	

## CQI Project

Data comparison of Pre-op Bath  
Pre & Post Implementation  
(Patient Survey)

Units	Nov-95
Surgical	17 (59%)
Gynae	9 (100%)
Ortho	2 (15%)
<hr/>	
Total	28 (55%)

**Developed** – work out the new process

# Making Infection Control Really Work – Managing the Human Factor

Prof. WH Seto, Hong Kong

A Webber Training Teleclass

## CQI Project

### Recommended Procedures

1. All pre-op patients should have a bath or be bathed thoroughly preferably using hibiscrub prior to surgery.
2. Removal of hair is to be avoided unless there is obvious obstruction to the incision site. If unavoidable, hair removal should be done by clipping or depilation cream.
3. Proper skin disinfection is to be done in the operating theatre before skin incision is made.

## CQI Project

### Recommended Procedures

1. All pre-op patients should have a bath or be bathed thoroughly preferably using hibiscrub prior to surgery.
2. Removal of hair is to be avoided unless there is obvious obstruction to the incision site. If unavoidable, hair removal should be done by clipping or depilation cream.
3. Proper skin disinfection is to be done in the operating theatre before skin incision is made.

**Execute** – implement new process

## CQI Project

### CQI Team Members

- Surgeons from Surgery, O&T, O&G.
- Ward Managers from Surgery, O&T, O&G, OTS.
- Nursing representatives from:  
CSSD, R&D, ICN, School of Nursing.

## CQI Project

### Intensive staff education

- eight lectures to nursing staff
- over 60% of all surgical nursing staff attended
- train the trainer

## CQI Project

### Data comparison of Pre-op Bath Pre & Post Implementation (Patient Survey)

<u>Units</u>	<u>Nov-95</u>	<u>Jan-96</u>
Surgical	17 (59%)	16 (84%)
Gynae	9 (100%)	6 (86%)
Ortho	2 (15%)	28 (100%)
-----		
<b>Total</b>	<b>28 (55%)</b>	<b>50 (93%)</b>

# Making Infection Control Really Work – Managing the Human Factor

Prof. WH Seto, Hong Kong

A Webber Training Teleclass

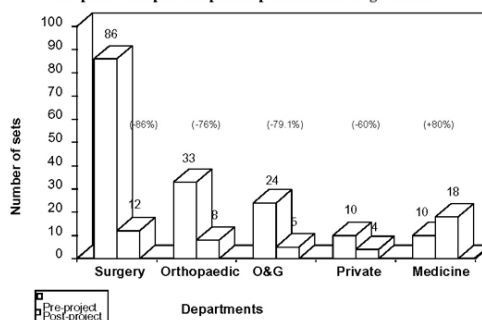

## CQI Project

Patients' Education Pre-op Bath  
(Pre & Post Protocol Comparison)

Unit	Pre Protocol	Post Protocol
Surgery	6.9%	73.7%
O&G	55.6%	85.7%
Orth.	0	100%
-----		
Total	13.7%	88.9%

Figure 1: Number of dressing sets used for pre-op skin prep: Comparison of pre and post implementation of guideline

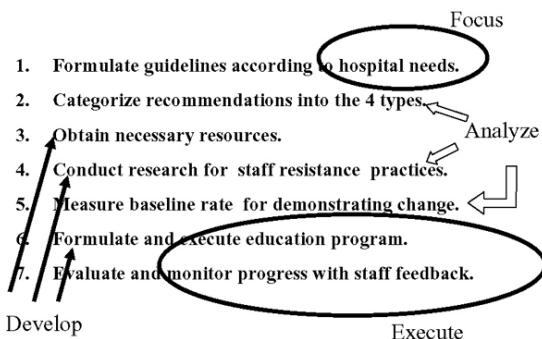

## CQI Project

### Results

1. Patients pre-op bath increased from 55% to 93%.
2. Pt's education increased from 13.7% to 88.9%.
3. A total of 127 CSSD sets saved for 2 weeks.
4. 18 nurse hour saved in 2 weeks.
5. NO increase in Surgical wound infection rate .

### Steps in Guideline Implementation

### Cultural Dynamics and organizational change

An Ethnographic study  
of an emerging medical subfield  
in Hong Kong.

PhD Thesis, W. L. Seto

Ethnography – systematic observation and description  
of a culture or social context

Aim – understand meaning of social actions.

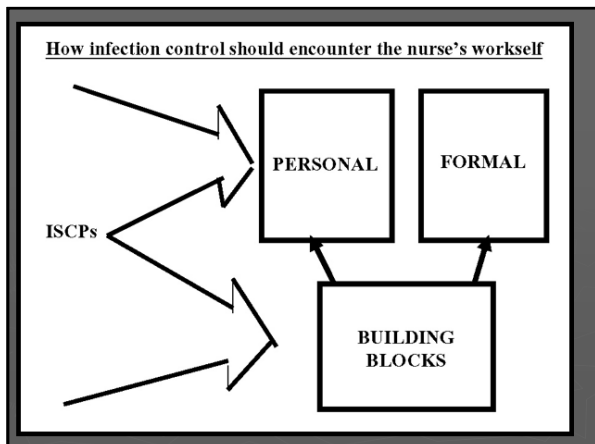

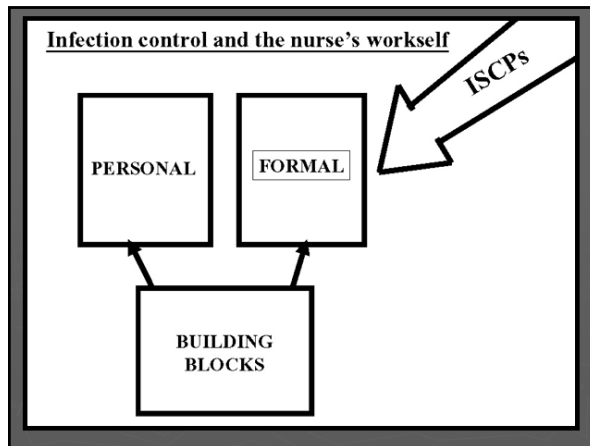

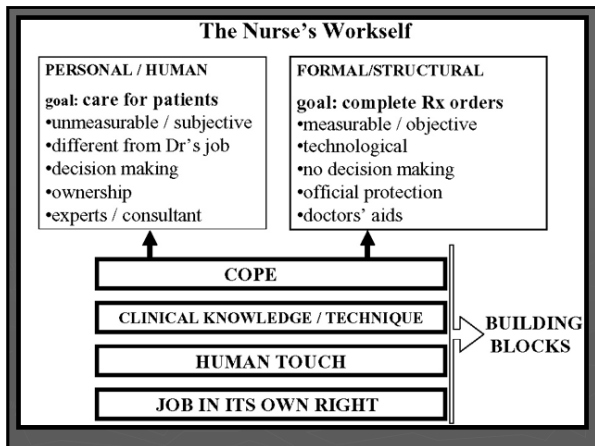

### Research Procedure:

- 12 months with infection control unit
- Participant observation & informal interview
- Access to all aspects of work, including ward visits.
- Undercover : as a research associate helping to design questionnaires.
- Worked also with 8 informants.

# Making Infection Control Really Work – Managing the Human Factor

Prof. WH Seto, Hong Kong

A Webber Training Teleclass

Survey to verify paradigm

Subjects: 1303 nurses in 23 hospitals  
 Date: 1992  
 Random sample of those on duty  
 159 NO,  
 625 RN  
 220 EN  
 299 SN

Q1. The work of nurses can be divided into 2 areas:  
 a. Carrying out treatment orders  
 b. Fulfilling nursing-care plan

Yes ----- 1095 (84%)  
 No ----- 208 (16%)

Q2. Only for "Yes" in Q1  
 Which area gives you most job satisfaction

Nursing care plan: 83%  
 Treatment order 13%  
 Both 3%  
 Neither 2%

# Making Infection Control Really Work – Managing the Human Factor

Prof. WH Seto, Hong Kong  
A Webber Training Teleclass

Q3. When carrying out IC recommendations,  
Would you consider it part of

Nursing care plan:82%

Treatment order: 9.7%

Q6. How frequent (7-points scale) do nurses fail to  
comply IC recommendations because of the following:

<u>Reasons</u>	<u>mean</u>
a. Too busy	4.9
b. Lack equipments	4.3
c. Conflict with Px order	3.3
d. Conflict with wd routine	3.5
e. Not enough authority	3.7
f. Disagree with rationale	3.0
g. Instruction not clear	3.4
h. Too laborious	3.7
i. Patient dislike	2.9
j. Nurses old habits	3.8

Q3. When carrying out IC recommendations,  
Would you consider it part of

Nursing care plan:82%

Treatment order: 9.7%

Q6. How frequent (7-points scale) do nurses fail to  
comply IC recommendations because of the following:

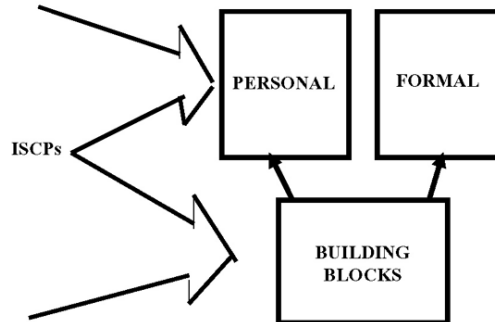

<u>Reasons</u>	<u>mean</u>	<u>NC plan#</u>	<u>Px order#</u>
a. Too busy	4.9	4.9	5.1
b. Lack equipments	4.3	4.3	4.6
c. Conflict with Px order	3.3	3.2	3.6
d. Conflict with wd routine	3.5	3.5	3.8
e. Not enough authority	3.7	3.7	3.8
f. Disagree with rationale	3.0	2.9	3.1
g. Instruction not clear	3.4	3.3	3.7
h. Too laborious	3.7	3.6	4.0
i. Patient dislike	2.9	2.8	3.4
j. Nurses old habits	3.8	3.7	4.0

# classified by Q3

## Infection control and the nurse's workself

## How infection control should encounter the nurse's workself

# Making Infection Control Really Work – Managing the Human Factor

Prof. WH Seto, Hong Kong  
A Webber Training Teleclass

Infection Control policies must be implemented  
in the context of the nurse's workshelf

## The Nurse's Workshelf

### PERSONAL / HUMAN

- goal: care for patients
- unmeasurable / subjective
  - different from Dr's job
  - decision making
  - ownership
  - experts / consultant

### FORMAL/STRUCTURAL

- goal: complete Rx orders
- measurable / objective
  - technological
  - no decision making
  - official protection
  - doctors' aids

Q8. When following infection control practices,  
Does the following occur? :

Building blocks	mean	NC plan#	Px order#	p
1. Actually benefit patients	5.6	5.6	5.3	0.02
2. ↑ quality of nursing care	5.7	5.7	5.4	0.005
3. ↑ work and I cannot cope	3.9	3.9	3.9	0.9
# classified by Q3				

Perhaps they are not washing their hands

.....because they cannot cope?

Time constraint = major obstacle  
for hand hygiene

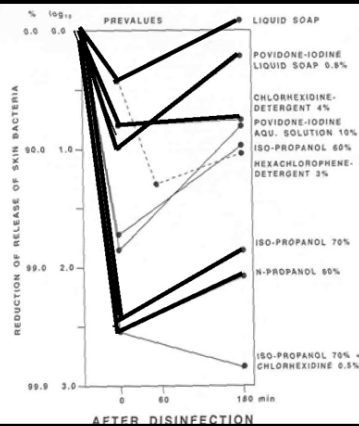

handwashing  
soap + water

1 to 1.5 min

alcohol-based  
hand rub

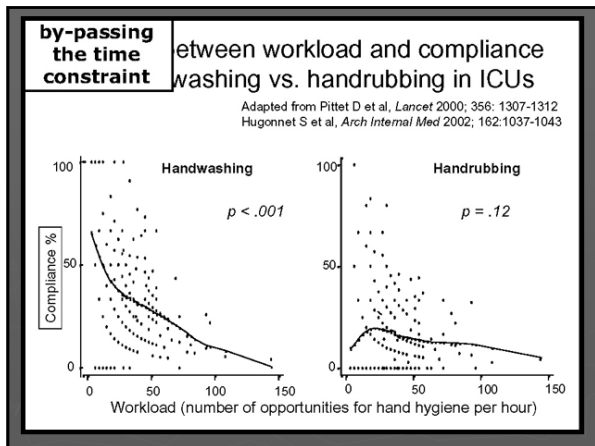

15 to 20 sec
