Are towelettes effective for surface decontamination in healthcare settings?

Jean-Yves Maillard

Cardiff School of Pharmacy and Pharmaceutical Sciences
Cardiff University

Hosted by Dr. Lynne Schulster

Prevention and Response Branch
Division of Healthcare Quality Promotion
Centers for Disease Control and Prevention

www.webbertraining.com

April 30, 2015

OBJECTIVES

- Review the usage of towelettes in healthcare settings, particularly pre-wetted towelettes
- Discuss the role of pre-wetted towelettes in healthcare settings
- Consider the claims made by pre-wetted towelettes' manufacturers in relation to the efficacy tests performed
- Review the efficacy of antimicrobial and detergent pre-wetted towelettes against bacteria, spores (*Clostridium difficile*) and viruses
- Reflect on the appropriate usage of pre-wetted towelettes and evidence that need to be provided by manufacturers to make an meaningful and practical claim
- Discuss potential new practical and regulatory challenges for pre-wetted towelettes

Are Towelettes Effective for Surface Decontamination in Healthcare Settings?
Prof. Jean-Yves Maillard, Cardiff University, Wales
A Webber Training Teleclass

ROLE OF SURFACES IN MICROBIAL TRANSMISSION

MRSA

- Link between inanimate environmental contamination and infected or colonized individuals
- 65% of nursing staff that had directly treated an infected individual contaminated their gowns/uniforms with MRSA
- MRSA contamination of gloves was also observed in 42% of personnel who had no direct contact with the patient, but had touched surfaces in infected patient's rooms *Boyce et al. ICHE1997; 18:622-7.*
- Hand contamination from surface *Bhalla et al. ICHE 2004; 25:164-7.*

7

Teleclass 2015

ROLE OF SURFACES IN MICROBIAL TRANSMISSION

Prevalence of *Clostridium difficile*

- Floors, commodes, toilets, bed pans, bed frames
Vonberg et al. Clin Microbiol Infect 2008; 14: 2-20.
- *C. difficile* spores persistence on surfaces : 5 months
Kramer et al. BMC Infect Dis 2006; 6:130-8.
- *C. difficile* incidence data correlated with the prevalence of environmental spores in 1 ward (out of 2).
Fawley et al. Epidemiol Infect 2001; 126: 343-50.

8

Teleclass 2015

Are Towelettes Effective for Surface Decontamination in Healthcare Settings?
Prof. Jean-Yves Maillard, Cardiff University, Wales
A Webber Training Teleclass

ROLE OF SURFACES IN MICROBIAL TRANSMISSION

Cheeseman et al. J Hosp Infect, 2009; 72: 319-25.

| Observations | Hospital 1 | Hospital 2 |
|--|------------|------------|
| % observations where staff washed hands | 28 | 20 |
| % observations where staff used alcoholic hand rub | 30 | 9 |
| Of those incidences where no gloves worn, % incidences where staff used alcoholic hand rub | 41 | 14 |
| % staff wearing no gloves and used no AHR, but washed hands | 17 | 19 |
| % staff using no protection/skin sanitisation | 19 | 46 |
| % potential staff to object cross- contamination | 30 | 59 |
| % potential staff to patient cross-contamination | 4 | 0 |
| % potential object to object cross- contamination | 70 | 88 |
| % potential object to patient cross-contamination | 20 | 9 |
| % potential patient to object cross-contamination | 17 | 9 |

Low frequency of hand sanitisation, particularly with use of AHR lead to high incidence of potential cross contamination

Are Towelettes Effective for Surface Decontamination in Healthcare Settings?

Prof. Jean-Yves Maillard, Cardiff University, Wales
A Webber Training Teleclass

HOW TO DETERMINE WIPE EFFICACY?

“The main purpose of wipes is to remove contamination from surfaces. Additionally, some wipes may provide some antimicrobial activity by the inclusion of a disinfectant although this activity might be limited based on contact time, type of surface and contamination present.”
“There are currently no accepted standards to support the selection and purchase of disinfectant wipes in health care.”

Support the use of surface test rather than suspension test

17

Teleclass 2015

HOW TO DETERMINE WIPE EFFICACY?

Phase 2, step 2 tests: surface tests

- Determine bactericidal, fungicidal, virucidal or sporicidal activity under laboratory conditions that simulate practical conditions.
- Can be used to make a claim (liquid expressed from wipes)
- Application for surface disinfection

e.g. EN14561: Quantitative carrier test for the evaluation of bactericidal activity for instruments used in the medical area
Temperature: 20°C(4-40°C); contact time: 5 min (1-60 min) + soiling

18

Teleclass 2015

Are Towelettes Effective for Surface Decontamination in Healthcare Settings?
Prof. Jean-Yves Maillard, Cardiff University, Wales
A Webber Training Teleclass

HOW TO DETERMINE WIPE EFFICACY?

Phase 1, step 1 tests: basic activity (suspension test)

- Does my product show some antimicrobial activity (yes/no)
- Not to be used to make a claim

e.g. **(BS)EN14347:** Basic sporicidal activity
Temperature: 20°C; contact time one of the following 30, 60, 120 min;
no soiling (no *C. difficile*)

Phase 2, step 1 tests: suspension test

- Determine bactericidal, fungicidal, virucidal or sporicidal activity under laboratory conditions that simulate practical conditions.

e.g. **EN 13727:** Bactericidal suspension test
Temperature: 20°C(4-40°C); contact time: 5 min (1-60 min)
+ soiling

19

Teleclass 2015

HOW TO DETERMINE WIPE EFFICACY?

Efficacy of “antimicrobial” wipes

Qualitative –agar diffusion test (ISO 20645)

ISO 20645

CONTROL

TEST

Test interpretation: “good antimicrobial effect”

WIPE USAGE IN PRACTICE

Antimicrobial wipe usage

Williams et al. *J Hosp Infect* 2007; 67: 329-35

Observation of usage in practice –cleaning staff in ITUs

- use of wipes – surface area
- contact
- rotation

| Wipe Number | Surface initially wiped | Time applied (seconds) | Number of consecutive surfaces wiped (other surfaces) |
|-------------|-------------------------|------------------------|---|
| 1 | Bed Rail | 4 | 5 (bedside table, monitor X2, monitor stand) |
| 2 | Steel Trolley | 6 | 2 (both shelves on the trolley wiped) |
| 1 | Monitor | 4 | 5 (monitors, two keypads, monitor stand) |
| 2 | Bed rail | 7 | 4 (table, monitor, keypad) |
| 3 | Bedside table | 10 | 4 (folder, two bed rails) |

DO NOT REFLECT PRODUCT USAGE

23

Teleclass 2015

3-STEP TEST – A NEW ASTM Intl. STANDARD (04-15)

✓ Remove bioburden from a surface

Stage 1 – bacterial removal

How good are the wipes in removing microbial contaminants? (not killing effect)

✓ Prevent transfer of bioburden from the wipe to other surfaces

Stage 2 – bacterial transfer “adpression tests”

Can the wipes transfer survivors to other surfaces (i.e. cross-contaminate)?

✓ Where antimicrobial is present – kill the microbial bioburden

Stage 3 – Antimicrobial activity

Can the wipes kill the bacteria they remove?

DO ANTIMICROBIAL WIPES WORK?

TESTING WIPES EFFICACY: FIELD TRIAL

- Cross-over study in two gastro/surgery wards (1 and 2) with similar patient mix, design and layout (number of bedded-bay and bedded-side room)
- Cleaned using the current wipe regimen (detergent and chlorine) ● or a sporicidal wipe ★ for a period of 9 months.

Teleclass 2015

EDUCATION AND TRAINING

- **Integral to infection control and prevention**

NHS personnel (medical and non-medical staff) and NHS users (patients and visitors).

- **Evidence that they can contribute to reductions in HCAs.**

Siani & Maillard. *Eur J Clin Microbiol Infect Dis* 2015; DOI: 10.1007/s10096-014-2205-9.

- **Disparity in training**

Nurses and healthcare assistants were provided with induction training on infection control in 90% of NHS Trusts, whilst only 16% of senior doctors received training.

National Audit Office, *The management and control of hospital acquired infection in acute NHS trusts in England.*, 2009, The Stationary Office: London

A WAY FORWARD

Auditing product efficacy and usage – manufacturers' responsibility

- The choice of disinfectant will depend on its intended use, thus the manufacturer's instructions should be followed to ensure correct application Maillard & McDonald. *In Pract* 2012;34: 292-9.
- Procurement – include auditing as part of product package

Education of end users

- Joint manufacturers and NHS provider responsibilities
- Procurement - include product training, educational material (poster etc.)

47

Teleclass 2015

A WAY FORWARD

BETTER UNDERSTANDING

Key criteria

- Mechanical effect
- Formulation: correct balance of surfactants

A WAY FORWARD

BIOCIDES ARE IMPORTANT!

PREVENTION, PREVENTION PREVENTION

COMPLIANCE (only 30% surface disinfected)

ANTIMICROBIAL WIPES

Removal of bioburden from surfaces

Added value – vegetative bacteria –

kill within the contact time (10 sec)

- spores - ? – wipes safe to dispose of.
